

eTANKs are high-performance storage tanks, container format, which can satisfy the latest requirements in terms of economy, environment and transport. They are adapted for all types of road binders and incorporate the latest technology while offering maximum flexibility of use in stationary or mobile version.

Economy

- Economic transport: Container format with approval for shipping
- Possible installation without civil engineering
 - Stationary or transportable version: installation on stabilized ground or on concrete blocks
 - Mobile version: permanently mounted on a trailer equipped with 4 additional landing gears
- Fast commissioning
- Low energy consumption

Environment

- Available with or without integrated retention tank
- Reinforced insulation for optimal energy efficiency
- Tank, pipes and accessories electrically heated
- Horizontal format for a better environmental integration

Technology

- Latest generation of insulation
- Total suppression of thermal bridges
- Standard and modular design configurable on demand (feeding pump, dosing pump, loading arm ...)
- Autonomous working with integrated control system adapted for the most severe conditions
- Bus communication between the tanks and with the automation system of a mixing plant or a bitumen plant

eTANK

BITUMEN - FUEL - EMULSION

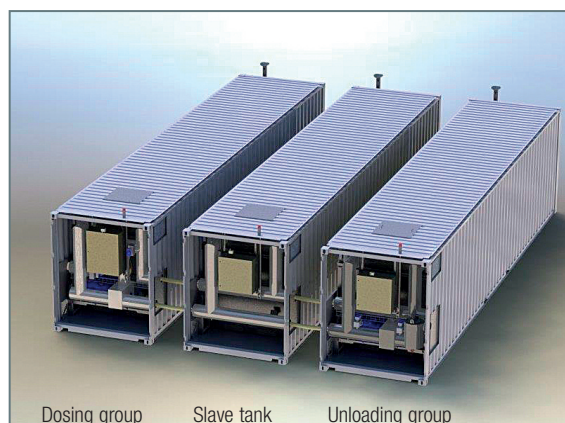

Wide range of modular equipment

- Integrated feeding, dosing or loading group
- Loading arm foldable in the container
- Manual or fully automated control
- Emulsion self service system with customer badge
- Power generator for a complete autonomy
- Adapted trailer with gear landing for filling on site

Transport and unloading of a full eTANK 20

Model	eTANK 20	eTANK 50
Capacity	20 m ³ useful volume	48 m ³ useful volume
Format	Container 20" HC	Container 40" HC
Tare Weight	7 200 Kg	14 000 Kg
Transport / unload	Full tank	Empty tank

Dosing group Slave tank Unloading group
