

FLUXUS® ADM 6725

Specifications

FLEXIM

FLUXUS® ADM 6725 is a portable ultrasonic flowmeter. With its clamp-on transducers and its rechargeable battery, it is an ideal tool for service work.

Here as well as in all instruments of the FLUXUS® ADM series, the digital signal processor (DSP) and the high number of measuring cycles guarantee stable and reliable measuring results even under difficult conditions.

The operation of the flowmeter is especially easy thanks to the user-friendly and clearly structured user dialogue.

All transducer pairs delivered with the instrument have been calibrated. The calibration data and the transducer parameters are saved in a transducer internal non-volatile memory and are automatically sent to the transmitter upon connection to facilitate the operation of the flowmeter. A zero adjustment is not necessary.

The transducers and their conduit are made of stainless steel and are suitable for use in harsh industrial environment. Watertight sensors and integrated robust transducer cables make it possible to obtain good measurement results over a long period of extensive usage.

Features

- Minimal installation effort and costs
- Measurement is independent of fluid conductivity and pressure
- No pressure loss, no risk of leakage
- No dismantling of the pipework or interruption of process necessary for the mounting
- No additional fittings required for maintenance work
- Hygienic measurement, suitable for ultra clean liquids
- No contact with the medium, no risk of corrosion when used with aggressive media
- Advantageous price when used with pipes of large diameter or in high pressure systems
- Low stocking costs since only 2 types of transducers are needed to cover all pipe sizes
