STAINLESS STEEL SLEEVE

For the CINTROPUR® semi- and industrial filters

The filter media is made of a single layer of AISI 316L stainless steel with a fineness of 50 µm or 90 µm.

The filter screen is woven in an S-shape with vertically weft threads and not in a square shape as in all conventional screens.

MAIN ADVANTAGES:

1. Excellent stability of the filter screen due to its special design
2. Very large filtration surface (from 530 up to 1288 cm²)
3. Slower clogging of the sleeve
4. Easier cleaning of the sleeve
5. Intended for frequent and repeated cleaning
6. Optional silver bacteriostatic filter screen treatment

The assembly of the sleeve on the cylindrical support with the vane and the cap is made in our workshop with a high-strength food-quality glue approved by KTW, ACS, KIWA, KOMO and WRAS.

This safe and reliable installation ensures a perfect seal between the raw water and the filtered water.

Two delivery options are available: either on the cylindrical support + vane + cap, or originally fitted on the complete filter.
