Submersible pumps

The electric submersible sewage pumps have been specially designed to operate submerged in the pumped fluid. The hydraulic section is close coupled to the electric motor making the pumping unit compact, easy to install and reliable in operation. The pumps are essential in depuration systems and are widely used in the sewage handling facilities of industry and local communities. The GK series electric pumps are designed to pump sewage containing gas, compacted solids and long fibrous material. The pumps can be supplied for fixed or submersible installation with base frame. The design has paid particular attention to achieving a good overall efficiency to ensure that the pumps are as cheap as possible to run.

#### MOTOR

Asynchronous, three-phase with squirrel-cage rotor.

The motor is cooled by the fluid in which it is submerged or by a forced cooling system.

The motor is separated from the pump by a large chamber partially filled with oil that acts as a lubricant for the mechanical seals and as a heat exchanger.

Ensure compliance with the minimum head value given with the dimensions of each individual electric pump in order to ensure that the motor is correctly cooled, the exception being made for motors with forced cooling.

#### SUPPORTS

The shaft of the motor, on the extension of which the impeller is mounted, is guided by two bearings prelubricated with grease; the lower one supports the axial thrust.

The rotating assembly is very compact, with a short overhung pump shaft which reduces bearing loads and ensures reliability and long life.

#### MECHANICAL SEALS

The double mechanical seal (mounted in series) is a dual protection safeguarding the electric motor.

If the seal on the pump side becomes faulty, the motor will not be damaged thanks to the second seal on the motor side.

These seals are made of particularly suitable materials able to withstand heavy-duty conditions; the pump side seal is made with abrasionproof materials.

#### SAFE OPERATION

- The conductivity sensor in the oil chamber warns if there is water and transmits the relative signal to the appropriately preset electric panel.

This checks that the mechanical seals on the pump side operate correctly.

- The motor is equipped with thermal probes connected in series in the stator winding.

Should over-temperature conditions occur, the probes automatically cut off the power.

Electric pumps of the GK series feature three different hydraulics with the following characteristics.

**Page 318**

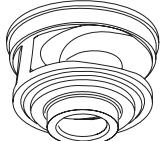

**GKV**

#### RETRACTED VORTEX IMPELLER

The impeller offers reliability against clogging due to the feature of wide through passages, and a good resistance to wear thanks to the absence of shimming. The versatility of use compensates for this impellers somewhat lower efficiency. The impeller can be reduced in dimension to offer different characteristics. For water containing a large amount of solids and long fibre, sewage with a high gas and sludge content.

**Page 331**

**GKC**

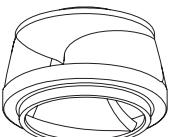

#### SINGLE-CHANNEL IMPELLER

It offers reliability against clogging and features wide through sections and a good resistance to wear, low mechanical action on the fluid, high hydraulic efficiency.

Particularly suitable for clean water, water containing solid and fibrous solids, cloacal water, sewage and sludge.

Low vibrations thanks to the dynamically balanced impeller.

**Page 352**

**GKN**

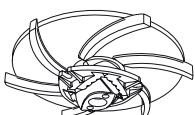

#### DOUBLE CHANNEL IMPELLER

It offers reliability against clogging and features wide through sections and a good resistance to wear, low mechanical action on the fluid, high hydraulic efficiency.

Particularly suitable for clean water, water containing solid and fibrous solids, cloacal water, sewage and sludge.

Low vibrations thanks to the dynamically balanced impeller.

**Page 363**

**GKG**

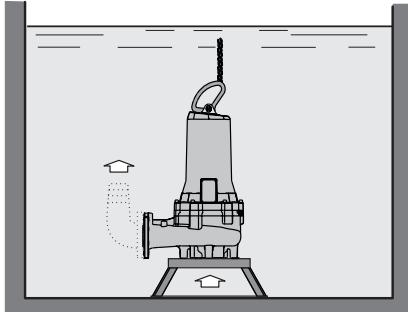

#### SHREDDER

Made of very hard stainless steel, the shape of the shredder ensures long-life and fade-free shredding capacity.

Waste water disposal from gas stations, community housing and neighbourhoods.

No particular tools are required to replace this part.

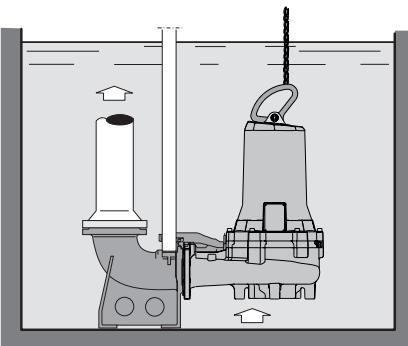

## STANDARD INSTALLATIONS

### Mobile and emergency immersed installation with support foot

Version only recommended with electric pump installed on a solid and flat support surface and with flexible delivery pipe, particularly suitable for:

- all occasional or exceptional uses
  - use on site or where mobility is required
  - renovation of existing stations with architectural constraints.
- The support frame, flexible delivery pipe bend, chain, etc. are available.

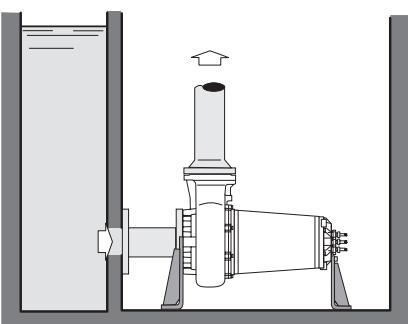

### Fixed installation with guide chute and automatic coupling base.

It is the most suitable installation for fixed lifting stations. No special building infrastructures are required and the system is easy to build. The quick coupling allows quick and easy extraction and subsequent repositioning of the electric pump in the tank, allowing ordinary maintenance or exceptional interventions to be performed in complete safety without having to enter the collection tank. The coupling foot, guide pipes, chain, etc. are available for this installation.

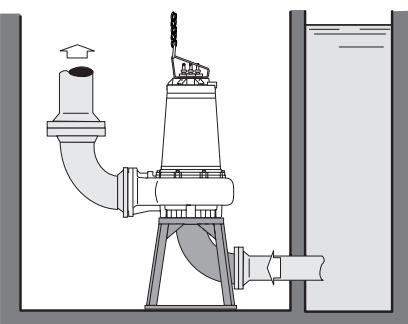

## IN A DRY CHAMBER

It is the horizontal or vertical installation that requires a dry chamber, adjacent to the liquid collection tank, to house the electric pump unit. Compared to traditional non-submersible machines, it has maximum operating safety and absence of risks even in the event that the dry chamber is submerged in liquid. Support stands are available.

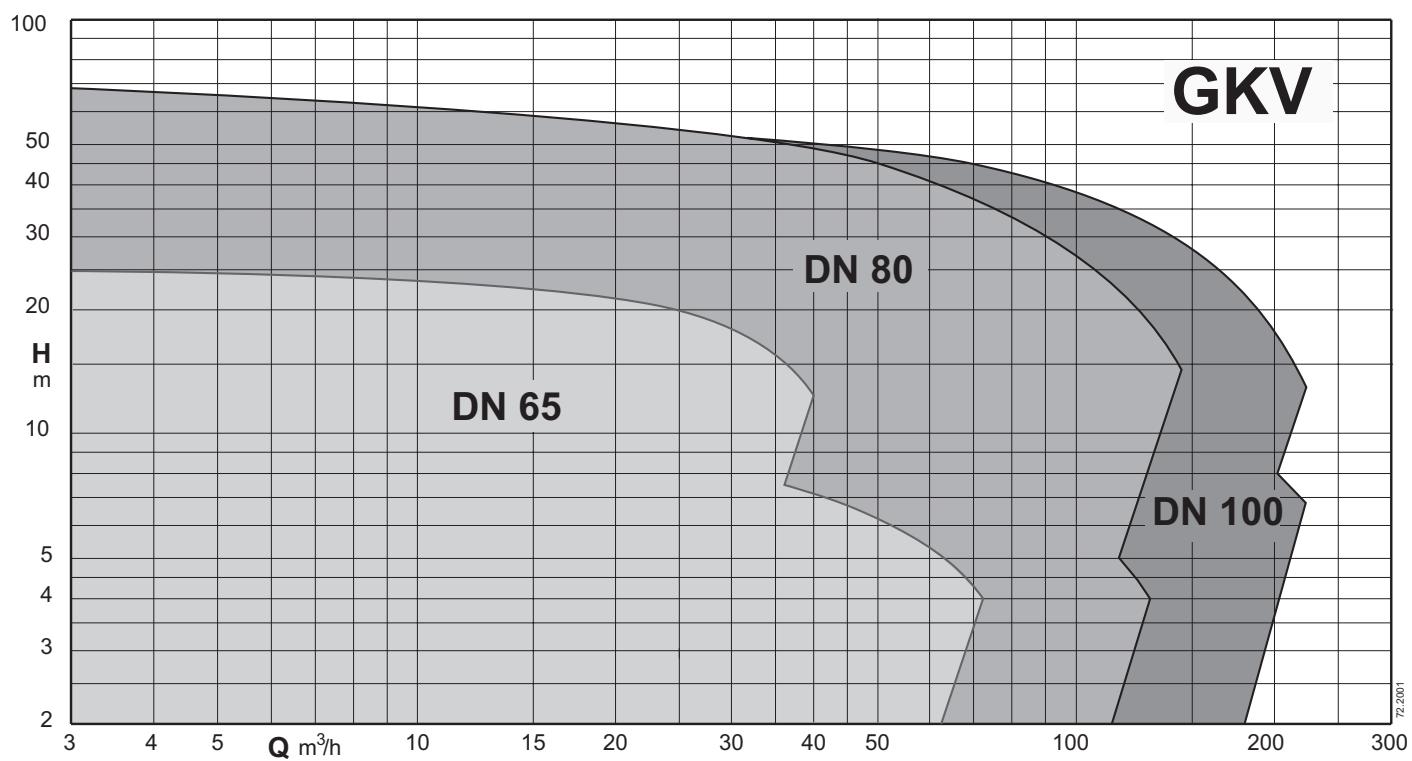

### HORIZONTAL

With outlet vent pointing upwards. The electric pump is attached with support brackets. This arrangement requires a limited number of special pieces. The suction is horizontal and the delivery is vertical with a limited overall height.

### VERTICAL

This arrangement allows for maximum ease of inspection and maintenance, the suction and delivery are horizontal and it ensures minimum overall dimensions in plan configuration.

Submersible pumps with vortex impeller

## Construction

Submersible pumps with vortex impeller.

The impeller offers reliability against clogging due to the feature of wide through passages, and a good resistance to wear thanks to the absence of shimming. The versatility of use compensates for this impellers somewhat lower efficiency. The impeller can be reduced in dimension to offer different characteristics. Delivery port DN 65-80-100.

## Applications

For waste water and sewage with suspended bodies and with the presence of filamentous bodies, they are particularly suitable for the emptying of wells or primary collection tanks and septic tanks in domestic, residential and industrial installations.

Solid passage from 55 to 100 mm.

## Operating conditions

Liquid temperature: from 0°C to +40°C.

Maximum immersion depth: 20m (with cable of suitable length).

Maximum working pressure: 80 m.w.c.

pH of the liquid to be lifted: 4 ÷ 10

Continuous service (with water at minimum immersion level).

## Materials

Pump casing: cast iron

Impeller: cast iron

Motor casing: cast iron

Shaft: stainless steel

Motor side mechanical seal: graphite/ceramic

Pump side mechanical seal: silicon carbide/ceramic

L1min = Minimum submergence depth for motor without casing with continuous duty S1 (NPSHR permitting)

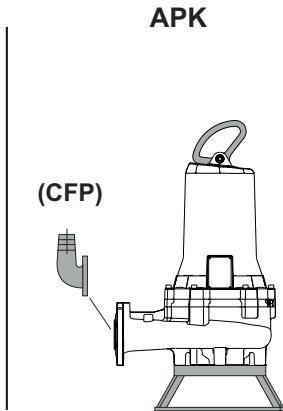

Lmin = Minimum submergence depth for motor without casing with intermittent duty S3 (NPSHR permitting)

Submersible pumps with single channel impeller

## Construction

Submersible pumps with single-channel impeller.

It offers reliability against clogging and features wide through sections and a good resistance to wear, low mechanical action on the fluid, high hydraulic efficiency.

Low vibrations thanks to the dynamically balanced impeller.

Delivery port DN 65-80-100-150-200-250

## Applications

Particularly suitable for clean water, water containing solid and fibrous solids, cloacal water, sewage and sludge.

Particularly suitable for the emptying of sewage from cesspits or primary collection tanks or industrial waste water.

Solid passage from 40 to 163 mm.

## Operating conditions

Liquid temperature: from 0°C to +40°C.

Maximum immersion depth: 20m (with cable of suitable length).

Maximum working pressure: 80 m.w.c.

pH of the liquid to be lifted: 4 ÷ 10

Continuous service (with water at minimum immersion level).

## Materials

Pump casing: cast iron

Impeller: cast iron

Motor casing: cast iron

Shaft: stainless steel

Mechanical seal pumps with insulation class H

- motor side: graphite/ceramic
- pump side: silicon/ceramic carbide

Mechanical seal pumps with insulation class F

- motor side: stainless steel/graphite
- pump side: Silicon carbide/silicon carbide

= Standard

o = Optional

# = Version with oil chamber

- = Not present

## Motor

2,4,6,8 pole, 50Hz induction motor.

**Three-phase version:** 400V ± 10%, up to 4.8kW  
400/690V ± 10% from 5.8kW

Isolation class: F or H

Degree of protection: IP 68

Max number of starts per hour:

- 20 up to 5 kW
- 15 up to 10 kW
- 10 for higher powers

Cable: length 10m

Direction of rotation: clockwise top view

## Designation

GKC4 100-80A-0058R

GK = Series

C = Single-channel impeller

4 = Number of poles

100 = Delivery port diameter in mm

80 = Free passage in mm

A = Impeller trim

0058 = Motor size kW x 10

R = With cooling jacket

L1min = Minimum submergence depth for motor without casing with continuous duty S1 (NPSHR permitting)

Lmin = Minimum submergence depth for motor without casing with intermittent duty S3 (NPSHR permitting)

submersible pumps with channels impeller

## Construction

Submersible pumps with multi-channel impeller.

Characterised by good protection against clogging, large spherical passages, good wear resistance, low mechanical action on the fluid and high hydraulic efficiency at high flow rates.

Low vibrations thanks to the dynamically balanced impeller.

Delivery port DN 200-250-300-350.

## Applications

For the movement of sewage and sewage grates.

Particularly suitable for the emptying of sewage from cesspits or primary collection tanks or industrial waste water.

They replace single-channel pumps when a high solids passage diameter is not required.

Solid passage from 100 to 164 mm.

## Operating conditions

Liquid temperature: from 0°C to +40°C.

Maximum immersion depth: 20m (with cable of suitable length).

Maximum working pressure: 80 m.w.c.

pH of the liquid to be lifted: 4 ÷ 10

Continuous service (with water at minimum immersion level).

## Materials

Pump casing: cast iron

Impeller: cast iron

Motor casing: cast iron

Shaft: stainless steel

Mechanical seal pumps with insulation class H

- motor side: graphite/ceramic
- pump side: silicon/ceramic carbide

Mechanical seal pumps with insulation class F

- motor side: stainless steel/graphite
- pump side: Silicon carbide/silicon carbide

## Motor

Induction motor 4-6 or 8 poles, 50Hz

400/690V ± 10%

Isolation class: F or H

Degree of protection: IP 68

Max number of starts per hour:

- 20 up to 5 kW
- 15 up to 10 kW
- 10 for higher powers

Cable: length 10m

Direction of rotation: clockwise top view

## Designation

GKN4 200-100A-0260R

GK = Series

N = Multi-channel impeller

4 = Number of poles

200 = Delivery port diameter in mm

100 = Free passage in mm

A = Impeller trim

0260 = Motor size kW x 10

R = With cooling jacket

Submersible pumps with high power  
grinder

## Construction

Submersible pumps with high cutting power shredder system.  
Made of very hard stainless steel, the shape of the shredder ensures long-life and fade-free shredding capacity.  
No particular tools are required to replace this part.  
Delivery port DN 40.

## Applications

To move water containing long filamentary materials, paper or textile material. They are particularly suitable for the disposal of waste water in domestic, residential and industrial use.  
Solid passage 4 mm.

## Operating conditions

Liquid temperature up to 40°C.  
Maximum immersion depth: 20m (with cable of suitable length).  
Maximum working pressure: 80 m.w.c.  
pH of the liquid to be lifted: 6 ÷ 10  
Continuous service (with water at minimum immersion level).

## Materials

Pump casing: cast iron  
Impeller: cast iron  
Motor casing: cast iron  
Shaft: stainless steel  
Motor side mechanical seal: graphite/ceramic  
Pump side mechanical seal: silicon carbide/ceramic

## Motor

Induction motor 2.4 poles, 50Hz  
**Three-phase version:** 400V ± 10% up to 4.8 kW  
400/690V ± 10% from 5.8 kW

Isolation class: H  
Degree of protection: IP 68  
Max number of starts per hour: 20 at regular intervals  
Cable: length 10m  
For other models: contact our sales office

## Designation

GKG2 40-4T-0020  
GK = Series  
G = Impeller with shredder system  
2 = Number of poles  
40 = Delivery port diameter in mm  
4 = Free passage in mm  
T = Impeller trim  
0020 = Motor size kW x 10

## Accessories

### Non-return ball valves

#### Construction

Non-return self-cleaning ball valves, suitable for dirty and viscous liquids, sewage water.

#### Operating conditions

Working temperature from -10°C up to +80°C

Rated pressure: 10 bar

Vertical or horizontal installation

#### Materials

Valve body: Cast iron EN-GJL-250

Cover: Cast iron EN-GJL-250

Ball: Resin for threaded VNRP

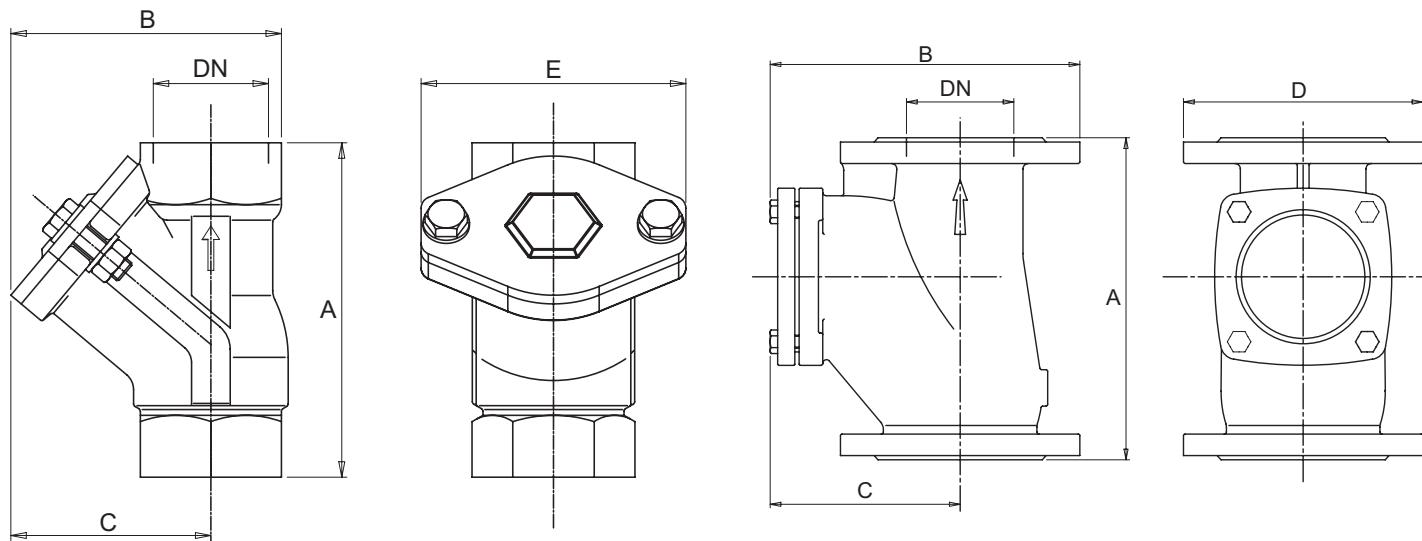

Resin + NBR for VNRP DN 50-100

Cast iron + NBR for VNRP DN 125-250

Screws: SS AISI 304

Joint: nitril

#### Dimensions and weights

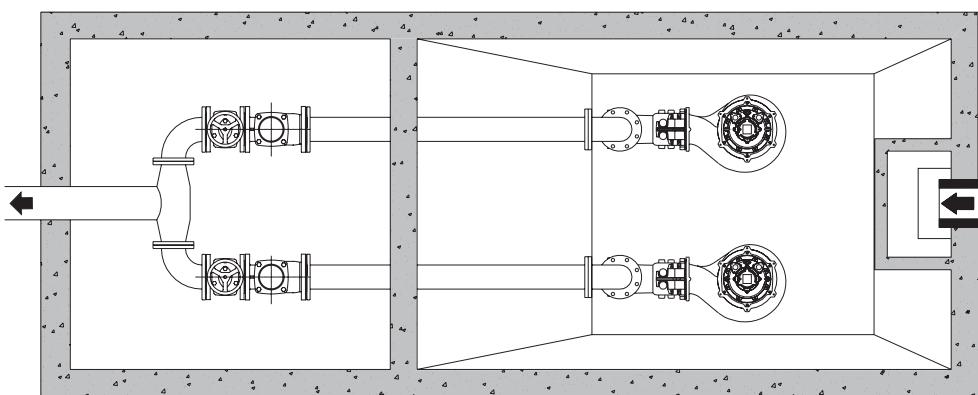

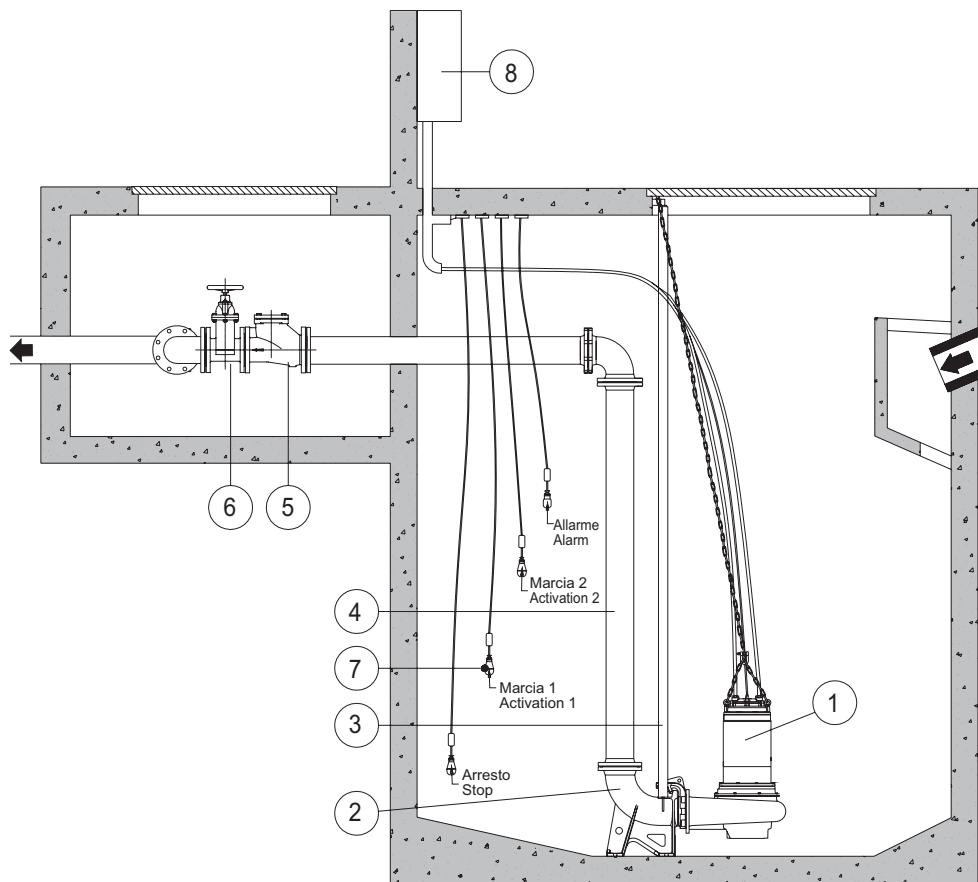

Pump type	DN	mm				Weight
		mm	A	B	C
